

# CONNECTIONS Build Bulletin

## Introducing the Next Modernization to the CONNECTIONS Application: Organizational Hierarchy, Agency Access, and Progress Notes

The next build to the CONNECTIONS application will include the modernization of Organizational Hierarchy and Agency Access windows, both security components of CONNECTIONS. The build will also tentatively include the modernization of the Progress Notes module of the Family Services Stage. The build is scheduled for the weekend of September 25.

All changes will be cosmetic only, following the “look and feel” of other modernized CONNECTIONS modules (i.e. CPS Investigation Stage, Family Services Intake (FSI), etc.) As such, there will be no changes to existing functionality in any of the affected windows.

Due to the relative simplicity of this phase, there will be no formal training offered; users should be able to adequately familiarize themselves with the modernized windows via build support documentation that will be provided closer to the build date.

More information, including the final composition of the build, a more detailed implementation schedule for the weekend of September 25, as well as build support documents, will be provided in the near future.
