New Using Option in the PHR Allows You to Prefill From Previous PHR

New Using Launch Option

The New Using option allows you to launch a new PHR with information prefilled from the last completed PHR for a particular child. The pre-filled information in the narratives of the new PHR may then be edited as needed to update or remove information.

When selecting a PHR from which to pre-fill, you *must* use a previous report for the *same* child. You cannot select a PHR belonging to a different child (a sibling, for example), but you can pre-fill from a previous Multiple Child report that included the child.

REMINDER: A child can be involved in only one in-process PHR at a time. Before a new PHR can be launched, the previous one involving that child must be in “Final” status.
