

Notification Regarding the Data Warehouse Training Database

4/18/03

The training database, which is available to all Data Warehouse users, was refreshed with new data during this past weekend. Details on accessing the training database are available in the [Data Warehouse Step by Step Guide](#).

The following changes will be noted in both the training database and the production database.

- All references to Mohawk County have been changed to Hudson County.
- In the CCRS placement related cubes (admissions, discharges and in care) an additional level of detail is available in the dimension “age range”. Users will be able to select an individual age year.
- A new sub folder titled “Report Library” has been added to the Data Warehouse folder. This folder contains IMRs that have been developed by staff to meet specific user requests for data. Report descriptions and report samples are provided in a document titled [Data Warehouse Report Library Listing](#). This document can be found on the OCFS Data Warehouse link on the Connections website.
