NYS OCFS

Build Status Update: Issues Corrected 6/18

The subsequent issues encountered following the Family Assessment Response (FAR) build in CONNECTIONS have been corrected:

- A problem was identified with the completion of Safety Assessments in cases where there were multiple Investigation or FAR Stages and a Safety Assessment was created in two different stages, resulting in an error message or “missing” saved Safety Assessment. This problem was corrected on 6/13. **A data fix was implemented in the 6/18 morning maintenance window correcting existing Safety Assessments with errors created prior to the fix on 6/13.**
- An issue encountered when attempting to sort Progress Notes has been corrected. Progress Notes can now be viewed and printed in chronological order.

Upcoming Fixes: 6/20

The following issues are slated for correction next Friday, 6/20.

- The Individual Report of Involvement (IRI) report will incorporate the new FAR changes.
- Risk Assessment calculations for FAR Stages will no longer discount Question 1 (prior reports) from its calculation of Risk.
- The role of XE (Reported in Error), NO (No Role), or UK (Unknown) will no longer be updated to FR when a FAR Stage is closed.
- Users were unable to merge PIDS in CONNECTIONS via the Person Search path—this will be corrected.
