

# CONNECTIONS Build Bulletin

June 13, 2014

NYS OCFS

---

## Build Status Update: Issues Corrected 6/13

The subsequent issues encountered following the Family Assessment Response (FAR) build in CONNECTIONS have been corrected:

- A sporadic application fault (shutting down the CONNECTIONS application) that occurred when selecting Case Summary from the workload via the Agency Access path has been corrected.
- The Print Notes link in the Progress Note Window is now enabled in INV and FAR Stages for Secondary Workers.
- A problem identified with the completion of Safety Assessments in cases where there are multiple Investigation or FAR Stages and a Safety Assessment is being created in two different stages, resulting in an error message or “missing” saved Safety Assessment, has been corrected. (Please note that although this issue has been fixed going forward, existing stages that have been impacted by this error require a data fix and are not yet corrected).
- An update was made to text control in the Intake Narrative, Investigation Conclusion, Safety Assessment Narratives and Progress Notes to allow copying of information from read-only documents.

---

## Upcoming Fixes: 6/20

The following issues are slated for correction next Friday, 6/20.

- The Initial Report Inquiry (IRI) report will incorporate the new FAR changes.
- Risk Assessment calculations for FAR Stages will no longer discount Question 1 (prior reports) from its calculation of Risk.
- Certain fields on the Progress Note Window will be shrunk to enable Notes to be saved without having to scroll down to access the Save button.
