

Updating the OS on your iPad

You can always check to see if your iPad is running the most current Operating System (OS). There are two ways to update the OS for your device.

- **On the iPad:**
 1. Select the Settings icon, and then General.
 2. The second item listed on the right is Software Update, select it.
 3. The iPad will check to see if your software is up to date.

4. Select Install Now. (If there is an update available you generally need to log on to a Wi-Fi network in order to download the OS since OS updates are frequently above the 20 MB limit. Also, if there are any battery concerns you may want to plug in your iPad as well.)
5. Agree to the terms and conditions.
6. The iPad will verify the update and then run the update. It will restart your iPad. When it is done you will be back to the Passcode screen.
