<p>9b. How are estimates of the number of families receiving consumer education determined?</p>	<p>The number of families receiving consumer education is estimated by adding 3 sources of consumer contacts: number of initial calls from parents requesting child care information from 35 child care resource and referral agencies; number of phone calls received by the Administration for Children’s Services Division of Child and Family Well-Being Call Center Hotline in NYC (NYS’s largest local social services district); and the number of unique webpage views for the NYS OCFS child care internet site excluding the child care webpages that are targeted to child care providers or becoming a child care provider.</p>	
<p>10. No longer collected effective FFY2016 (OCC is not changing the numbering of the questions, so that users of the data are not confused when they analyze data across fiscal years.)</p>

15. Please enter explanatory comments regarding any of the data elements as appropriate.

Element 2a: Child fatality data for children in the care of a child care provider who received child care subsidy payments is not yet available. Elements 5 and 6: The number of children per provider type served through grants/contracts was estimated separately for NYC and Rest of State and those estimates combined for the final number. For NYC, the percentage of voucher vs contract enrollments from ACS and HRA were combined and applied to the total unduplicated number of children from element 2. For Rest of State, the average percentage of payments flagged as contracted in the Child Care Time and Attendance system was applied to the total unduplicated number of children from element 2. Element 7: It is not possible to distinguish between payments made directly to parents or made directly to providers on parents' behalf.

16. Please attach any reports, materials, information developed as a result of the use of CCDF quality funds.
