Note: Certain counties were excluded from the above table due to the following reasons: (1) counties with less than 50 Black children under 18 years; and (2) counties with less than 6 Black children with preventive services authorized. The following types of changes should be interpreted with extreme caution: (a) for small counties, particularly when the number of children in a particular category is small, sharp changes in disparity rates; and, (b) when disparity rate is available in one year and NOT for another, it indicates that the rate for the year where available was calculated on a small number, although above the requisite threshold.

	13	Erie	2.7	Erie			

Note: Certain counties were excluded from the above table due to the following reasons: (1) counties with less than 50 Native American children under 18 years; and (2) counties with less than 6 Native American children with CPS reports. The following types of changes should be interpreted with extreme caution: (a) for small counties, particularly when the number of children in a particular category is small, sharp changes in disparity rates; and, (b) when disparity rate is available in one year and NOT for another, it indicates that the rate for the year where available was calculated on a small number, although above the requisite threshold.

**Prepared by the OCFS Office of Research, Evaluation and Performance Analytics.**

**Native American Disparity Rate: Unique Children in CPS Indicated Reports CY 2020**

Disparity index is ratio of rate of unique Native American children named as confirmed victims in CPS indicated reports per 1000 Native American children under 18 in county relative to comparable rate for white children

State disparity ratio <sup>1</sup>=

**1.18**

Note: Certain counties were excluded from the above table due to the following reasons: (1) counties with less than 50 Native American children under 18 years; and (2) counties with less than 6 Native American children named as confirmed victims in SCR indicated reports. The following types of changes should be interpreted with extreme caution: (a) for small counties, particularly when the number of children in a particular category is small, sharp changes in disparity rates; and, (b) when disparity rate is available in one year and NOT for another, it indicates that the rate for the year where available was calculated on a small number, although above the requisite threshold.
